

KRISTALBOND SAPPHIRE WINDOW COATING

WHY IS IT GREEN?

Kristalbond Window Coating is a high-performance coating that reduces heat transmission through a glazing, while maintaining high visible light transmission.

On a single layer of clear glazing, an application of Kristalbond Window Coating improves its Light to Solar Gain (LSG) ratio to 1.37. This LSG ratio places it among the top single glazing properties for rejecting heat without compromising visible light transmission.

PRODUCT FEATURES

- Low VOC
- Improve thermal comfort in a building
- Reduce air-conditioning use and energy costs
- Does not sacrifice visible light entering a building
- Promotes natural light harvesting
- Reduce harmful UV rays by 99%
- No peeling, no bubbling, permanent solution
