WHY IS IT GREEN?

3M™ Novec™ 1230 Fire Protection Fluid is a next generation halon replacement, designed to alleviate concerns for human safety, performance and environment.

Novec™ 1230 fluid has the key features defining sustainable clean agent protection:
- Zero ozone depletion potential
- A global warming potential of 1
- 5-day atmospheric lifetime
- A large margin of safety for occupied space

Novec™ 1230 fluid was created for life: for the life of your people, to help keep them safe from fire and chemical hazards; for the life of your equipment, to effectively protect it from fire; and for the life of your system, so it not only meets today's environmental regulations but those of the foreseeable future.

PRODUCT FEATURES

- A highly efficient fire extinguisher that can be used for flooding applications in engineered and pre-engineered systems.
- Wide margin of safety in use – providing more flexibility in system design compared with other halon alternatives and ensures that occupants can safely egress the space since the NOAEL will not be exceeded.
- Is electrically non-conductive (does not damage electronics, electronic media and delicate mechanical devices)
- Is non-corrosive
- Rapidly vaporizes to gas during discharge
- Leaves no residue
