

## PALING ECOTECH PIPES

### WHY IS IT GREEN?

Paling brand Ecotech pipes have a center layer made of pre-consumer reprocessable materials (with 50% to 70% recycled content) that is generated in-house from the manufacturing process based on the company's very own formulation.

In addition, it utilises advanced co-extrusion technology in its production, increasing efficiency, productivity, and reducing embodied energy in the material.

This unique core in the pipe body is also designed to prevent algae and other microbial growth inside the pipes by blocking light penetration. This feature ensures the bore remains smooth for a better flow rate. Therefore, Ecotech pipes are perfectly suitable for soil, waste and ventilation as well as rainwater applications, especially those installed outdoors.

Paling brand Ecotech pipes are made with a lead-free formulation, are environment friendly and fully recyclable.

### PRODUCT FEATURES

- A three layer pipe that offers a cost effective solution associated with quality, performance and reliability for building drainage.
- Prohibits algae growth inside the pipe by blocking light penetration. Provides a low coefficient of flow friction.
- Excellent resistance to chemicals found in domestic effluents. Environment friendly, lead-free and fully recyclable.
- Certified by SIRIM QAS International Sdn Bhd to BS EN 1329-1, BS 4514 and MS 1063.
