

# DYSON AIRBLADE HAND DRYERS

## WHY IS IT GREEN?

- Dyson Airblade™ hand dryers produce up to 80% less CO<sub>2</sub> than some other traditional hand dryers and up to 81% less than paper towels.
- Warm air dryers can take up to 30 seconds to dry hands - slow and energy hungry while Dyson Airblade™ hand dryers dries hands in just 10 - 14 seconds i.e less energy consumption.
- Dyson Airblade™ hand dryers have a lower environmental impact across measures including carbon emission and energy consumption.
- Dyson Airblade™ hand dryers are the only hand dryer certified by the Carbon Trust and Singapore Green Building certification scheme to a 2-ticks rating.

## PRODUCT FEATURES

Dyson Airblade™ hand dryers come in three models: a quiet, hands-under dryer, a hands-in machine that dries hands in just 10 seconds, and even one that dries hands at the sink. They dry hands quickly and effectively using:

### Airblade™ Technology

Sheets of high velocity unheated air travel through tiny apertures at up to 690 km/h quickly scraping water from hands like a windscreen wiper, leaving them fully dry.

### The Dyson digital motor V4

The Dyson digital motor V4 is compact and powerful; it uses digital pulse technology to spin up to three times faster than some traditional hand drying motors.

### HEPA filters

Dyson Airblade™ hand dryers have HEPA filters installed as standard, which capture 99.95% of particles the size of bacteria (0.3 microns) from the washroom air so hands are dried with cleaner air, not dirty air.
