

ZONECHECK AUTOMATIC FLOW-SWITCH TEST SYSTEM

WHY IS IT GREEN?

Zonecheck is an automatic flow-switch testing device. It works by using a closed loop system that re-circulates water within the pipe around the flow-switch, to simulate the flow of one sprinkler head in operation and tests the flow-switch saving 100% of the water normally discharged to waste. Testing using Zonecheck negates the need to run large fire pumps in order to refill the system, saving energy.

As no fresh oxygenated water is introduced inside the system, corrosion is kept to a minimum which prolongs the life of the sprinkler system.

Testing with Zonecheck is much more efficient, time saving, requires fewer resources (electricity and labour) also using Zonecheck, specialist contractors are no longer required to travel to site to carry out testing; all of which means a more sustainable system and a substantial reduction in the carbon footprint of maintaining a sprinkler system.

PRODUCT FEATURES

- 100% water saving – Zonecheck circulates water rather than expelling it
- Sustainable – enormously saving resources and maintenance costs and reduction in life cycle carbon footprint
- Simplicity of testing – carry out flow-switch test by simply turning a key
- Testing is quick and can be run any time with no disruption to day-to-day business
- No additional skilled manpower required to carry out tests
- Fully automatic testing
- Easy to install and user friendly
- Remote flow-switch testing
- Reduce corrosion
- Increase the system's life by not triggering the fire-pump frequently
- The only flow-switch tester currently approved to UL, LPCB, FM and VdS

PRODUCT CERTIFICATION & COMPLIANCE

ISO9001, ISO14001, UL, LPCB, FM, VdS, UL Environment Certified
