

MEDKLINN OZONE WATER SYSTEM

WHY IS IT GREEN?

Medklinn Ozone Water System increases hygiene and safety levels in cleaning, sanitizing and disinfecting, without chemicals. Ozone is a highly reactive form of oxygen, consisting of three oxygen atoms (O₃). It is a powerful and effective disinfectant and oxidizer. Ozone readily decomposes into oxygen and leaves no harmful residues, by-products, tastes, or odours. FDA has approved the use of ozone as an antimicrobial agent for use in treatment, storage and food processing.

MedKlinn Ozone Water System is used in a variety of applications such as food processing, drinking water, general cleaning, agriculture and many more. Ozone Water can also be applied to cooling towers by replacing the use of chemical biocides to eliminate/reduce scaling, algae and micro-organism build-up.

MedKlinn Ozone Water System uses an integrated venturi system with an ozone generator to produce ozone water in an effective way. The ozone gas vigorously mixes with the water passing through the venturi system to dissolve the ozone in the water.

PRODUCT FEATURES

- Reduces energy cost by eliminating the use of hot water for disinfecting or sanitization
- Reduces the use of chemical solutions
- Reduces the use of water consumption due to less chemical usage
- Environmentally friendly solution
- Dissolves oil and grease to ease servicing or cleaning
- Removes microorganism build-up
- Able to treat grey water or harvested rain water for general purpose use
